

Windows & Microsoft on Google Cloud

A first-class experience for Microsoft and Windows-based workloads

Start with Migration

Migrate and run Microsoft and Windows Server-based applications on powerful, scalable infrastructure with the choice to self-manage workloads or leverage managed services. Use services that include bundled licenses or bring your own.

Optimize and Modernize to reduce cost

Optimize your license expense and exposure by increasing usage efficiency through innovative features built into existing products. Google Cloud provides an open path to modernization—containerization of Windows servers, cloud-native development practices, and multi-cloud readiness.

Benefits

- Bring your own licenses
- Use VM images with licenses included
- Fully managed SQL Server
- Fully managed Active Directory
- Windows on Kubernetes
- Migration and Upgrade tools
- SQL Server and .NET

“Moving to Google Cloud Platform wasn’t just an infrastructure decision — it’s a fundamental shift in how we solve problems for our customers.”

Kevin Sproles,
CEO

volusion

What’s new?

- Custom VM shapes
- Support for Windows containers in Kubernetes
- General availability of managed services
- Sole-tenant nodes with live migration
- CPU Overcommit
